### DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-29, and 47-48, drawn to a method of normalizing genetic data for n loci, classified in class 702, subclass 19.

II. Claims 30-46, drawn to a method for clustering genetic data for n loci, classified in class 702, subclass 20.

The inventions are distinct, each from the other because of the following reasons.

Inventions of groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The instant specification does not disclose that these methods would be used together. The method of normalizing genetic data for n loci (group I), and the method of treating a disease using a polypeptide (group V), and the method of clustering genetic data for n loci (group II) are unrelated as they comprise distinct steps and utilize different products which demonstrates that each method has a different mode of operation. Each invention performs this function using a structurally and functionally divergent material. For example, the invention of group I requires identifying a set of sweep points in the coordinate system, identifying a set of control points, determining parameters of a registration transformation equation and transforming the n sets, which are not required in the method of group II. On the other hand, group II requires comparing fit of genetic data to a plurality of cluster models using an artificial neural network and assigning

the signal values to one cluster according to the best fit cluster model, which are not required in the method of group I. For the same reasons, the searching of the two groups would not be coextensive.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the search required for each group is not required for the other groups because each group requires a different non-patent literature search due to each group comprising different products and/or method steps, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
